

AMENDMENTS TO THE SPECIFICATION :

Please substitute the following paragraph for the paragraph 0002 starting at page 1,  
line 14:

--[0002] In a CRT (cathode-ray tube), it has been known that a connection portion between an anode electrode and a connection terminal connected to a voltage-feeder line is covered with a ~~sucker-like~~ sucker-like anode cover entirely made of an insulating material so as to prevent the connection portion, to which high voltage is applied, from dust adhesion and water immersion, resulting in suppressing electric discharge (Japanese Patent Laid-Open No. 4-106861).--
